

[COMPANY NAME] AI TOOLS ACCEPTABLE USE POLICY

Purpose: To empower workforce productivity using Artificial Intelligence while protecting company, client, and proprietary data.

1. CORE PRINCIPLES

We encourage the responsible exploration of AI tools to automate repetitive workflows, brainstorm ideas, and increase operational efficiency. However, our commitment to data security, privacy, and accuracy remains absolute. Every team member is fully accountable for the outputs and data inputs of any tool they use.

2. DATA CLASSIFICATION & INPUT RESTRICTIONS

The single greatest risk of public AI tools (such as the free tiers of ChatGPT, Claude, or Midjourney) is that inputs are used to train public models. To mitigate data leaks, you must strictly follow these rules:

✓ Safe to Input (Public/General Data)

- Public marketing copy or website content
- Generic, non-proprietary code snippets
- General industry research or business concepts
- Draft outlines for internal emails or schedules

✗ Strictly Prohibited Inputs

- Customer / Employee Data:** Names, PII, CVs
- Financial Data:** Revenue, pricing models, bank details
- IP & Secrets:** Source code, product roadmaps
- Legal Data:** Contracts, internal dispute files

3. SANCTIONED VS. SHADOW AI TOOLS

To balance security and utility, tools are grouped into the following categories:

- Approved Enterprise Tools:** [e.g., Microsoft 365 Copilot / Google Workspace Gemini / Paid Company Tier]. These platforms guarantee corporate data privacy; inputs are *never* used for external model training. Use these by default.
- Conditional Consumer Tools:** Free tiers of web AI tools may be used **only** for tasks involving purely public information, provided all input restrictions in Section 2 are strictly met.
- Banned Tools:** Any AI tool requiring the download of a desktop executable or browser extension must be vetted and approved by [IT/Management Team] before installation.

The "Human-in-the-Loop" Mandate

AI models routinely experience "hallucinations" (generating confident but entirely fabricated facts or numbers). **Never copy-paste AI outputs directly into client deliverables, financial reports, or public-facing copy without thorough human verification.** You are personally responsible for the accuracy of your final work product.

4. CLIENT DISCLOSURE & INTELLECTUAL PROPERTY

- Client Agreements:** Check individual client master service agreements (MSAs). If a client strictly prohibits AI involvement in their deliverables, you must completely refrain from using AI for their account.

- **Copyright Awareness:** AI-generated content (images, writing, code) cannot currently be copyrighted. Core business assets meant for long-term ownership should be created natively.

5. COMPLIANCE AND VIOLATIONS

Using unapproved tools to process sensitive company information bypasses our security architecture and constitutes a data breach. Intentional or negligent violations of this policy may lead to revocation of tool access and formal disciplinary action, up to and including termination.
